

Designed for flexibility of using a hand-held mobile scanning solution with built-in intelligence and ease of use to manage inventory.

All warehouse functions can be accomplished from a handheld terminal with an integrated bar code scanner, making the process faster and far more accurate than manual data entry.

Mobility is Lean Inventory

Effectively manage your inventory for enhanced material flow efficiency, visibility and accuracy

ITEM LOOKUP

Quick and easy access to item information. Lookup item information by scanning item, entering item lookup code, or search by description. View details such as item lookup code, description, quantity, category, and price. Sort items by item lookup code, description or quantity. Search Items by Code, Description and Category.

RECEIVING

Receive against purchase orders and transfers. Increase efficiency of receiving merchandise. Scan items (or manually enter item code for items with no barcode) and enter quantities received (including serialized inventory). If a barcode or SKU is not available, lookup the item by description. Easily update data in back office system to adjust quantities of PO and non-PO items.

PUT AWAY

Multiple rules can be set up by the warehouse manager to determine how the system determines the best location. Specify whether to perform an automatic or manual put way transaction. Accurately put away items by scanning the item ID or location label, or applicable serial / lot information.

PICKING

Set up automatic pick generation based on specified criteria. Enhance the efficiency of picking, by allowing the grouping of orders for picking purposes. Orders can be automatically assigned to the appropriate pick plan based upon selected criteria.

PHYSICAL COUNT

Saves time and improves accuracy of a physical inventory count. Scans barcode (or manually enter item lookup code or alias for items with no barcode) to record actual store quantities. Quickly update information and calculate differences in recorded and actual inventory. Compare against quantities in your item database to reveal shrinkage or other inventory discrepancies.

PURCHASE ORDERS

Purchase order items can also be received directly from the backend ERP system. View purchase orders by selecting supplier or items. View details such as supplier, delivery date, item code, description, unit of measure, and quantity.

STOCK TRANSFER

A versatile Stock Transfer module allows inventory to be shipped between locations easily and efficiently. Full stock transfer facilities between stock locations, including tracking of stock in transit and eliminate manual documents. Simple procedure to acknowledge receipt of inter-location transfers.

INVENTORY ADJUSTMENT

Inventory adjustments let you add to or reduce from stock items in a particular warehouse. Each adjustment requires specified reason codes, which are saved in an audit trail.

FEATURES

- Search by Item Code, Description, Category etc
- Scan Barcode or Manually enter item code to View item details
- Physical Count in single item mode entry (increment qty by 1) or multi item mode (input qty)
- View purchase order details at any time
- Maximize accuracy with paperless receiving using wireless hand-held
- Receive full or partial quantity against Purchase order or transfer order
- Put away items accurately by scanning the item ID label, location label, and applicable serial/lot information
- Automatic pick generation based on specified rules
- Automatically print barcode labels during the receiving process.
- Automatic allocation of items received for customer orders
- Instantly update inventory levels with any inventory transaction
- Track items in-transit

BENEFITS

- Wireless mobility
Allows access to critical operational information anytime anywhere in the warehouse without being confined to specific location
- Improved Warehouse Management System - Inventory Records
Orderly and systematic collection of stock movement and transactional information to quick inventory analysis
- Maximum Warehouse Efficiency
Reduce excessive inventory holding costs, optimize stock holding level and location & shelf tracking of specific items in the warehouse
- Flexibility
Easy configurability and set up of inventory grouping and transactional set-ups
- Traceability
Cut stationary cost and lost of business data due to misplacement of documents, also helps to enhance security due to having a central repository to hold data
- Improved Customer Satisfaction
Access to key service information such as inventory availability level
- Improved Productivity
